Summary

AI Engineer with 3+ years delivering production Machine Learning, GenAI, LLM in commercial environments. Experienced across the modern data science stack — Python, SQL, Scikit-learn, XGBoost, RAG pipelines, vector databases and cloud-based AI services (AWS SageMaker). Skilled in model deployment, MLOps workflows, API development (FastAPI), and translating business requirements into scalable, production-ready AI systems. Strong track record partnering with cross-functional stakeholders to convert operational problems into measurable, optimization-driven decision-making solutions.

Work Experience

- **EXL solutions, Dubai** — Full Time
  Automation Engineer — *Feburary 2026 – Present*

  Technologies: Python, Computer Vision, YOLO, OpenCV, Docker, CCTV/IP Cameras
  - Developed and deployed AI-powered PPE detection and vehicle speed monitoring solutions for real-time industrial safety monitoring.
  - Trained and optimized YOLO-based computer vision models for real-time object detection and automated safety-event identification.
  - Containerized AI inference applications using Docker and deployed them for integration with existing CCTV/IP camera infrastructure.
  - Developed real-time AI monitoring and alerting workflows to automate safety violation detection and notification.
  - Integrated computer vision inference pipelines with camera systems to support production-oriented AI automation.

- **IGO solutions, Chennai** — Contract
  Junior AI/ML Engineer — *April 2025 – December 2025*

  Technologies: Python, XGBoost, Scikit-learn, AWS SageMaker, Amazon S3, Machine Learning
  - Developed machine learning solutions for container stacking optimization in terminal port operations to support placement prediction and operational decision-making.
  - Built and optimized ML pipelines using Python, XGBoost and Scikit-learn for predictive decision-making.
  - Developed AI workflows simulating autonomous decision-making/agent workflows for operational optimization.
  - Integrated trained ML models with AWS SageMaker and Amazon S3 to support scalable cloud-based AI services.
  - Applied business rules and domain-specific logic to convert operational requirements into scalable AI solutions.

- **InstaVC, Hyderabad** — Full-Time
  Associate Software Developer — *June 2024 – March 2025*

  Technologies: Python, React.js, AWS Lambda, WebRTC
  - Built real-time video conferencing solutions with React.js and WebRTC, supporting scalable deployments.
  - Designed AWS Lambda Layers for efficient serverless execution.
  - Integrated MongoDB for high-performance data management in collaborative applications.
  - Designed **serverless Python APIs and real-time pipelines** supporting AI-driven workflows.

- **Peoplelink Unified communication private ltd, Hyderabad** — Intern
  AI Intern — *August 2023 – May 2024*

  Technologies: Java, REST API, R, Python
  - Contributed to Frame Xtract, an AI-powered human detection video frame rendering solution..
  - Developed a Flask web application utilizing OpenCV (cv2) to capture video frames from the webcam.Implemented the Haar Cascade Classifier for real-time human face detection and displayed the live video stream on a webpage
  - Built **real-time video frame extraction pipelines** enabling autonomous decision-making workflows
  - Implemented OCR-based frame extraction logic for identifying and processing text regions in real-time video frames, enhancing accuracy in content recognition.

Projects Done

- **Local LLM RAG-Based Personal Knowledge Assistant** July 2026
  React + NLP(Natural Language Processing)

  Technologies: Python, Ollama, Llama 3.2, LangChain, ChromaDB, RAG, Vector Embeddings, FastAPI
  - Developed a Retrieval-Augmented Generation (RAG) application using a local LLM to answer questions from user-provided documents and knowledge sources.
  - Built a document processing pipeline for document loading, text chunking, embedding generation and vector-based similarity retrieval.
  - Implemented ChromaDB vector storage to retrieve relevant document context before generating LLM responses.
  - Integrated Ollama with Llama 3.2 for local LLM inference, reducing dependency on external hosted model APIs.
  - Developed the application as a modular AI workflow separating document ingestion, retrieval, context generation and response generation.

- **Speech To Text Translation Using NLP** May 2024
  Natural Language Processing

  Technologies: Deep Learning, Translation models, Speech-to-Text API
  - Developed a **multilingual text translation** project in Google colab, leveraging advanced NLP models for real time audio recording and processing, audio – to – text transcription, tokenization and multilingual translation.
  - Integrated deep learning techniques to improve translation accuracy and processing speed.Implemented automated speech recognition (ASR) to enhance the accuracy of audio-to-text transcription

Skills

- **Programming Languages**: Python, SQL, R, JavaScript
- **Machine Learning AI**: Machine Learning, Deep Learning, Natural Language Processing (NLP), Computer Vision, Feature Engineering, Predictive Modeling, RAG, Generative AI, Agentic AI
- **Data Science Statistics**: Regression, Probability, Statistical Analysis, Data Analysis, Data Visualization, Exploratory Data Analysis (EDA)
- **Cloud MLOps**: AWS, AWS SageMaker, AWS Lambda, AWS S3, Docker, Kubernetes
- **AI LLM Technologies**: Large Language Models (LLMs), Prompt Engineering, RAG, LLM Workflows, AI Agents
- **Databases**: PostgreSQL, MySQL, SQLite
- **APIs Development**: FastAPI, REST APIs, ASP.NET Core Web API
- **Tools Platforms**: Git, GitHub, Jupyter, Google Colab, Visual Studio, Linux/Ubuntu
- **Computer Vision OCR**: YOLO, OpenCV, PaddleOCR, EasyOCR, TrOCR
- **Algorithms CS Fundamentals**: Data Structures, Algorithms, Optimization, Problem Solving

Education

- **Anna University, Chennai, India(CGPA:8.5)** 2020 - 24
  Bachelor of Technology in Artificial Intelligence and Data Science

- **Higher Secondary School (Score: 69.5)** 2019 - 20
  Sri Bharathidhasan Matriculation Higher Secondary School
